## **SAP services**

The A&BS division supports your company in the optimisation of your business processes and, where necessary, in the configuration of SAP.

Our long-term process management and SAP experience has made us the partner of choice for many companies and organisations in both the Top and the Mid Market.

Sogeti focuses primarily on Trade, Transport, Industry, Government and Finance.

Sogeti is a Service Partner of SAP.

*The Architecture & Business Solutions (A&BS) division of Sogeti Netherlands ensures that ICT solutions represent an optimal match with your business processes and objectives, for user requirements and future changes.*

*Architecture creates the ICT frameworks in this respect; process management guarantees a decisive organisation; and implementation ensures the alignment between your business and your ICT.*

*The A&BS division aims for thought leadership. The market recognises and acknowledges our thought leadership.*

*Our standard works Regatta® (implementation methodology) and DYA® (Dynamic Architecture) are very successful in the market and are now used as the standard in several courses given by universities and colleges.*

## **SAP service delivery**

Every organisation has its own strategy and policy, which are implemented via the definition and configuration of its business processes. Such processes constitute the heart of the organisation and are generally supported by one or more standard applications.

Our team of functional and technical SAP consultants advises and supports companies in every phase of the implementation process, from feasibility study to actual implementation, and from testing, migration and conversion to training.

We support both 'traditional' SAP modules, such as SD, MM, PP, PM, FI and CO, and cross-module integration.

We are happy to act as your partner in aspects like Business Intelligence (BW), Strategic Enterprise Management (SEM), and WorkFlow Management (WFM), as well as Netweaver.

### ***SAP service offering***

Just a few examples from our comprehensive service offering:
